Notes on the Indices of Agricultural Production

The attached tables present indices of agricultural production for 24 countries of Africa and constitute a revision of the indices that were published by the Foreign Agricultural Service in November 1959. Appearing new this year are; the separate handling of the Congo (formerly Belgian Congo) and Ruanda-Urundi, the breaking down of Former French West Africa data so as to include separately Ivory Coast and Upper Volta, and the addition of Malagasy Republic. It will be noted that in Northern Africa Somalia has been dropped while Sudan (formerly included in the Near East Indices) has been added.

As in the previous study, these indices have been calculated on a postwar base (years 1952-53 to 1954-55). For the countries in Northern Africa production data for 1957-58, 1958-59, and 1959-60 have been revised to incorporate more recent refinements in crop estimates, and those for 1960-61 have been added. In a few instances revisions in the data for the base period were also made. For the countries in Southern Africa production data for 1956-57, 1957-58, and 1958-59 have been revised and those for 1959-60 have been added. Thus, a four year annual series for both Northern and Southern Africa appears this year for the first time. Data for the prewar period (1935-39) is included for Northern Africa but is omitted from Southern Africa due to the general lack of information.

The split year designated as 1958-59 for Northern

Hemisphere countries indicates crops harvested during the late spring, summer, and fall of 1958, but may include some crops, e.g. citrus, with harvests continuing into the early months of 1959. Data for livestock products are generally on a calendar year basis. For Southern Hemisphere countries the split year 1958-59 indicates crops harvested in the later half of 1958 and the first half of 1959.

Postwar price weights were used in computing the indices. Available data on prices in these countries, including FAO price weights, were used in establishing weights. The prices used represent the average postwar value of a metric ton of each agricultural commodity in the various countries at comparable stages in the marketing channels. The individual commodity price is expressed as a percent of the value of a metric ton of wheat. Thus, a metric ton of barley, with a price weight of 65, is equal in value to .65 of a ton of wheat.

To calculate agricultural production indices for each country, the production of each commodity was multiplied by the price weight and the resulting aggregates were summed. The total aggregate for a given year was then divided by the aggregate for the base period to obtain the index. The per capita indices were obtained by dividing the indices of total agricultural production by the population indices.

The same procedure was followed in calculating

the food production index, but only food crops were used. The commodities that were considered as food are given on page 51. The total output of each edible commodity was included regardless of whether or not it was all actually consumed as food. Similarly, no cognizance was taken of foreign trade, seed reserves, waste, or stock carryover. For these reasons, the indices of total and per capita food production are not to be regarded as indices of consumption.

It should be recognized that these indices represent not only basic changes in agricultural technology and economic development, but also, in some instances, special climatic conditions and changes in the political and economic situation.

TABLE 1.

Indices of agricultural production; total and per capita by countries of Africa.
 Northern Africa; average 1935-39, annual 1957/58-1960/61.
 Southern Africa; annual 1956/57-1959/60.

^{1/} The present Kingdom of Morocco, which includes former French Morocco (Southern Zone), former Spanish Morocco (Northern Zone), and the former Tangier Zone.
Production data for former Spanish Morocco is, in part, estimated. Agricultural production in former Tangier is negligible.

^{2/} Excluding sulphur oil.

^{3/} About 40 percent goat milk and 35 percent cow milk, the remainder is principally sheep milk.

^{4/} Fairly equally divided between beef and veal and mutton and lamb, with a remainder of about 5 percent representing other varieties.

Population index (1953 population - 3,072,000)							100	107	110	113	115

The following items were considered as food in the calculation of these indices:

Wheat
Corn
Barley
Oats
Rice, paddy

Yams
Sweet potatoes
White potatoes
Cocoyams
Taro

Rapeseed
Palm oil
Olive oil
Palm kernels
Soybeans

Cashew nuts
Almonds
Bananas
Plantains
Citrus fruit

Apricots
Artichokes
Carrots
Onions
Peppers

Sorghum and millet
Other grains
Beans and peas
Pulses
Cassava

Peanuts, unshelled
Cottonseed
Sesame seed
Sunflower seed
Nigerseed

Shea nuts
Bambara groundnuts
Cocoa
Sugar, refined
Kola nuts

Deciduous fruits
Grapes
Dates
Figs
Pineapples

Tomatoes
Milk
Eggs
Meat
